Medical Model vs. Recovery

-Do these work against each other?

Individual vs. disorder

-“Conflicting Incentives”

-System able to adjust to consumer’s changing needs

-Systems (state) must understand course of illness

-Rehab different than Recovery

-Great variability with consumers and their service needs – needs to be individualized not “cookie cutter”

-Expectations of system providers and funders should be consistent with recovery and resiliency

-Recovery is a journey

-Consumers receive respect

-Long-term Process

-Relapse expected not sign of “failure” or “resistance”

-Equal partnerships with consumers and families vs. expert, teacher role of provider

-Common Definition

Recognizing success = open back door

-All levels (state, provider, consumer, staff) living in the model

-Model and funding aligned

- Ongoing system of self-report and self-evaluation
- Maintain “Choice” for consumers
- Clarify definition of choice so that it works with recovery
